Rendezvous with God Nathan Laufer, 2016 A highly original holiday book, *Rendezvous with God* will make you see the holidays as you have never seen them before. In the words of R. Yitz Greenberg: In this wondrous book, Nathan Laufer gives us a stunningly fresh reading of the biblical holidays, illustrating how they celebrate the seven revelations of the Divine Presence during the first year of the marriage of God and Israel. A remarkable tour de force, *Rendezvous with God* weaves together thousands of biblical rituals with later rabbinic ordinances and popular holiday customs into a seamless whole, inseparably uniting Judaism's ethical and ritual dimensions. The book is so rich, it will provide understanding and pleasure to every kind of reader from the wise, informed expert to the unlearned lay reader.

The Depravities of War Sandow Birk, 2007 After the 2005 publication of his portfolio of etchings, *The Leading of Causes of Death in America*, Sandow Birk began a monumental print project inspired by a series of etchings called *The Miseries and Disasters of War* by Jacques Callot, printed in 1633. The project consists of 15 large-scale woodcut prints, each measuring 48 x 96 inches. Printed in collaboration with Master Printer Paul Mullowney, and assisted by HuiPress printer Casey Neumann, and Rhode Island School of Design interns Samuel Carr-Prindle and Nichol Markowitz, the images follow the course of the Iraq war. This landscape-styled book reproduces this project, along with selected paintings, and commentaries by other contributors on Birk's work and the artistic depiction of war and its atrocities.

Japan's Decision For War In 1941: Some Enduring Lessons Dr. Jeffrey Record, 2015-11-06 Japan's decision to attack the United States in 1941 is widely regarded as irrational to the point of suicidal. How could Japan hope to survive a war with, much less defeat, an enemy possessing an invulnerable homeland and an industrial base 10 times that of Japan? The Pacific War was one that Japan was always going to lose, so how does one explain Tokyo's decision? Did the Japanese recognize the odds against them? Did they have a concept of victory, or at least of avoiding defeat? Or did the Japanese prefer a lost war to an unacceptable peace? Dr. Jeffrey Record takes a fresh look at Japan's decision for war, and concludes that it was dictated by Japanese pride and the threatened economic destruction of Japan by the United States. He believes

that Japanese aggression in East Asia was the root cause of the Pacific War, but argues that the road to war in 1941 was built on American as well as Japanese miscalculations and that both sides suffered from cultural ignorance and racial arrogance. Record finds that the Americans underestimated the role of fear and honor in Japanese calculations and overestimated the effectiveness of economic sanctions as a deterrent to war, whereas the Japanese underestimated the cohesion and resolve of an aroused American society and overestimated their own martial prowess as a means of defeating U.S. material superiority. He believes that the failure of deterrence was mutual, and that the descent of the United States and Japan into war contains lessons of great and continuing relevance to American foreign policy and defense decision-makers.

US Submarines 1941-45 Jim Christley, 2006-01-31 Naval warfare in the Pacific changed completely with the Japanese attack on Pearl Harbor in 1941. The strategic emphasis shifted from battleships to much more lethal, far-ranging weapons systems; one of these was the submarine. This book details the design and development, classes, weapons and equipment, tactics and operational history of the US submarine in World War II. Detailed tables, photographs, and superb color plates depict the force that had an effect far beyond its size - the submarine accounted for 55% of all Japanese shipping losses, despite suffering the highest percentage loss of any unit of the United State Armed Forces in World War II.

One Hundred Years of Chemical Warfare: Research, Deployment, Consequences Bretislav Friedrich, Dieter Hoffmann, Jürgen Renn, Florian Schmaltz, Martin Wolf, 2017-11-26 This book is open access under a CC BY-NC 2.5 license. On April 22, 1915, the German military released 150 tons of chlorine gas at Ypres, Belgium. Carried by a long-awaited wind, the chlorine cloud passed within a few minutes through the British and French trenches, leaving behind at least 1,000 dead and 4,000 injured. This chemical attack, which amounted to the first use of a weapon of mass destruction, marks a turning point in world history. The preparation as well as the execution of the gas attack was orchestrated by Fritz Haber, the director of the Kaiser Wilhelm Institute for Physical Chemistry and Electrochemistry in Berlin-Dahlem. During World War I, Haber transformed his research institute into a center for the development of chemical weapons (and of the means of protection against them). Bretislav Friedrich and Martin Wolf (Fritz Haber Institute of the Max Planck Society, the successor institution of Haber's institute) together with Dieter Hoffmann, Jürgen Renn, and Florian Schmaltz (Max Planck Institute for the History of Science) organized an international symposium to commemorate the centenary of the infamous chemical attack. The symposium examined crucial facets of chemical warfare from the first research on and deployment of chemical weapons in WWI to the development and use of chemical warfare during the century hence. The focus was on scientific, ethical, legal, and political issues of chemical weapons research and deployment — including the issue of dual use — as well as the ongoing effort to control the possession of chemical weapons and to ultimately achieve their elimination. The volume consists of papers presented at the symposium and supplemented by additional articles that together cover key aspects of chemical warfare from 22 April 1915 until the summer of 2015.

German Northern Theater of Operations 1940-1945 [Illustrated Edition] Earl Ziemke, 2015-11-06 [Includes 23 maps and 31 illustrations] This volume describes two campaigns that the Germans conducted in their Northern Theater of Operations. The first they launched, on 9 April 1940, against Denmark and Norway. The second they conducted out of Finland in partnership with the Finns against the Soviet Union. The latter campaign began on 22 June 1941 and ended in the winter of 1944-45 after the Finnish Government had sued for peace. The scene of these campaigns by the end of 1941 stretched from the North Sea to the Arctic Ocean and from Bergen on the west coast of Norway, to Petrozavodsk, the former capital of the Karelo-Finnish Soviet Socialist Republic. It faced east into the Soviet Union on a 700-mile-long front, and west on a 1,300-mile sea frontier. Hitler regarded this theater as the keystone of his empire, and, after 1941, maintained in it two armies totaling over a half million men. In spite of its vast area and the effort and worry which Hitler lavished on it, the Northern Theater throughout most of the war constituted something of a military backwater. The major operations which took place in the theater were overshadowed by events on other fronts, and public attention focused on the theaters in which the strategically decisive operations were expected to take place. Remoteness, German security measures, and the Russians' well-known penchant for secrecy combined to keep information concerning the Northern Theater down to a mere trickle, much of that inaccurate. Since the war, through official and private publications, a great deal more has become known. The present volume is based in the main on the greatest remaining source of unexploited information, the captured German military and naval records. In addition a number of the participants on the German side have very generously contributed from their personal knowledge and experience.

Troopships of World War II Roland Wilbur Charles, 1947 This book contains authentic photographs and salient facts covering 358 troopships used in World War II. The Callendar Effect James Fleming, 2013-01-04 Guy Stewart Callendar (1898-1964) is noted for identifying, in 1938, the link between the artificial production of carbon dioxide and global warming. Today this is called the "Callendar Effect." He was one of Britain's leading steam and combustion engineers, a specialist in infrared physics, author of the standard reference book on the properties of steam at high temperatures and pressures, and designer of the burners of the notable World War II airfield fog dispersal system, FIDO. He was keenly interested in weather and climate, taking measurements so accurate that they were used to correct the official temperature records of central England and collecting a series of worldwide weather data that showed an unprecedented warming trend in the first four decades of the twentieth century. He formulated a coherent theory of infrared absorption and emission by trace gases, established the nineteenth-century background concentration of carbon dioxide, and suggested that its atmospheric concentration was rising due to human

activities, which was causing the climate to warm. Callendar's contributions to climatology led the way in the mid-twentieth-century transition from the traditional practice of gathering descriptive climate statistics to the new and exciting field of climate dynamics. In the first half of the twentieth century, the carbon dioxide theory of climate change xiv Introduction had fallen out of favor with climatists.

The VIIC Type U-Boot Waldemar Góralski, Mieczysław Jastrzębski, 2011-03 The type VIIC was a slightly modified version of the successful VIIB. They had basically the same engine layout and power, but were slightly larger and heavier which made them not quite as fast as the VIIB. 5 torpedo tubes (4 at the bow and one at the stern) were installed in all but the following boats; only two bow tubes (U-72, U-78, U-80, U-554 and U-555) and no stern tube (U-203, U-331, U-351, U-401, U-431 and U-651). The VIIC was the workhorse of the German U-boat force in World War Two from 1941 onwards and boats of this type were being built throughout the war. The first VIIC boat being commissioned was the U-69 in 1940. The VIIC was an effective fighting machine and was seen in almost all areas where the U-boat force operated although their range was not as great as the one of the larger IX types. The VIIC came into service as the Happy Days were almost over and it was this boat that faced the final defeat to the Allied anti-submarine campaign in late 1943 and 1944. Perhaps the most famous VIIC boat was the U-96 which is featured in the movie *Das Boot*, other noticeable boats were the U-flak boats. Many of these boats were fitted with the Schnorkel in 1944-1945. This design saw one more improvement in the type VIIC/41 boat. The larger mine-laying type VIID was a direct variant of the VIIC.

German U-Boat Ace Peter Cremer Luc Braeuer, 2016 This is the amazing story of legendary WWII U-boat commander, and Knight's Cross recipient, Peter Cremer. Cremer was appointed commander of U-333, a type VIIC submarine with a close-knit crew. During his first North Atlantic patrol U-333 sank three ships; unfortunately, the third victim was actually a German blockade-runner. Cremer was acquitted before a court martial. During his second patrol, the U-333 was rammed by an Allied tanker before reaching American shores. His later patrols were equally amazing. In April 1945, Cremer was ordered to take command of a panzer unit, Marine-Panzer-Vernichtungsbataillon, that was credited with destroying twenty-four tanks! Cremer ended the war as head of Grossadmiral Dönitz's security battalion. This biography details all WWII patrols by U-333 and features over 200 images and maps.

Extending Russia James Dobbins, Raphael S. Cohen, Nathan Chandler, Bryan Frederick, Edward Geist, Paul DeLuca, Forrest E. Morgan, Howard J. Shatz, Brent Williams, 2019-04-11 As the U.S. National Defense Strategy recognizes, the United States is currently locked in a great-power competition with Russia. This report seeks to define areas where the United States can compete to its own advantage. It examines Russian vulnerabilities and anxieties; analyzes potential policy options to exploit them; and assesses the associated benefits, costs, and risks, as well as the likelihood of successful implementation.

War with China David C. Gompert, Astrid Stuth Cevallos, Cristina L. Garafola, 2016-07-05 A Sino-U.S. war could take various, and unintended, paths. Because intense, reciprocal conventional counterforce attacks could inflict heavy losses and costs on both sides, leaders need options and channels to contain and terminate fighting.

Battle for the North Atlantic John R. Bruning, 2013-06-13 DIV From 1939 to the defeat of Nazi Germany in 1945, Allied ships and planes fought U-boats and other German warships to protect merchant shipping on the unforgiving North Atlantic./div

A Game of Birds and Wolves Simon Parkin, 2020-01-28 As heard on the New Yorker Radio Hour: The triumphant and engaging history (The New Yorker) of the young women who devised a winning strategy that defeated Nazi U-boats and delivered a decisive victory in the Battle of the Atlantic. By 1941, Winston Churchill had come to believe that the outcome of World War II rested on the battle for the Atlantic. A grand strategy game was devised by Captain Gilbert Roberts and a group of ten Wrens (members of the Women's Royal Naval Service) assigned to his team in an attempt to reveal the tactics behind the vicious success of the German U-boats. Played on a linoleum floor divided into painted squares, it required model ships to be moved across a make-believe ocean in a manner reminiscent of the childhood game, Battleship. Through play, the designers developed Operation Raspberry, a counter-maneuver that helped turn the tide of World War II. Combining vibrant novelistic storytelling with extensive research, interviews, and previously unpublished accounts, Simon Parkin describes for the first time the role that women played in developing the Allied strategy that, in the words of one admiral, contributed in no small measure to the final defeat of Germany. Rich with unforgettable cinematic detail and larger-than-life characters, *A Game of Birds and Wolves* is a heart-wrenching tale of ingenuity, dedication, perseverance, and love, bringing to life the imagination and sacrifice required to defeat the Nazis at sea.

The Cybernetics Moment Ronald R. Kline, 2015-07-15 Choice Outstanding Academic Title Cybernetics—the science of communication and control as it applies to machines and to humans—originates from efforts during World War II to build automatic antiaircraft systems. Following the war, this science extended beyond military needs to examine all systems that rely on information and feedback, from the level of the cell to that of society. In *The Cybernetics Moment*, Ronald R. Kline, a senior historian of technology, examines the intellectual and cultural history of cybernetics and information theory, whose language of “information,” “feedback,” and “control” transformed the idiom of the sciences, hastened the development of information technologies, and laid the conceptual foundation for what we now call the Information Age. Kline argues that, for about twenty years after 1950, the growth of cybernetics and information theory and ever-more-powerful computers

produced a utopian information narrative—an enthusiasm for information science that influenced natural scientists, social scientists, engineers, humanists, policymakers, public intellectuals, and journalists, all of whom struggled to come to grips with new relationships between humans and intelligent machines. Kline traces the relationship between the invention of computers and communication systems and the rise, decline, and transformation of cybernetics by analyzing the lives and work of such notables as Norbert Wiener, Claude Shannon, Warren McCulloch, Margaret Mead, Gregory Bateson, and Herbert Simon. Ultimately, he reveals the crucial role played by the cybernetics moment—when cybernetics and information theory were seen as universal sciences—in setting the stage for our current preoccupation with information technologies. Nowhere in the burgeoning secondary literature on cybernetics in the last two decades is there a concise history of cybernetics, the science of communication and control that helped usher in the current information age in America. Nowhere, that is, until now . . . Readers have in *The Cybernetics Moment* the first authoritative history of American cybernetics.—*Information & Culture* [A]n extremely interesting and stimulating history of the concepts of cybernetics . . . This is a book for everyone to read, relish, and think about.—*Choice* As a whole, the book presents a comprehensive in-depth retrospective analysis of the contribution of the American scientific school to the making, formation, and development of cybernetics and information theory. An unquestionable advantage of the book is the skillful use of numerous bibliographic sources by the author that reflect the scientific, engineering, and social significance of the questions being considered, competition of ideas and developments, and also interrelations between scientists.—*Cybernetics and System Analysis* Dr. Kline is perhaps uniquely situated to take on so large and complicated [a] topic as cybernetics . . . Readers unfamiliar with Wiener and his work are well advised to start with this well-written and thorough book. Those who are already familiar will still find much that is new and informative in the thorough research and reasoned interpretations.—*IEEE History Center* The most comprehensive intellectual history of cybernetics in Cold War America.—*Journal of American History* The book will be most valuable as historical background for the large number of disciplines that were involved in the cybernetics moment: computer science, communications engineering, information theory, and the social sciences of sociology and anthropology.—*IEEE Technology and Society Magazine* Ronald Kline's chronicle of cybernetics certainly does what an excellent history of science should do. It takes you there—to the golden age of a new, exciting field. You will almost smell that cigar.—*Second-Order Cybernetics* Kline's *The Cybernetics Moment* tracks the rise and fall of the cybernetics movement in more detail than any historical account to date.—*Los Angeles Review of Books*
